TEST PLAN

SauceDemo Web Portal - Manual Testing

Software Testing & QA Virtual Internship - Task 1

Field	Details
Document Title	Manual Test Plan & Test Case Suite - SauceDemo Web Portal
Prepared By	Manahil Shahzadi
Organization	Arrowstack Technologies (Virtual Internship, Batch 2026)
Reference / Roll ID	AS-2026-62840
Portal Under Test	SauceDemo (https://www.saucedemo.com)
Version	1.0
Date	October 2026

1. Introduction

This document describes the manual testing plan for the SauceDemo web portal (https://www.saucedemo.com), a demo e-commerce portal. Users can log in, browse products, sort items, add products to the cart, and log out. The plan explains what will be tested, how it will be tested, who will test it, and when testing is considered complete.

2. Objective

- Verify that every major feature of the SauceDemo portal works according to the expected behavior.
- Find defects early and report them clearly so they can be fixed.
- Check that the portal is usable, secure at a basic level, and works on common browsers and screen sizes.
- Provide a reusable test case suite with traceable results (Pass / Fail).

3. Scope

In Scope:

- Login (valid, invalid, empty fields, locked-out user)
- Products page: display, sorting, product details
- Menu / navigation
- Shopping cart: add and remove items
- Logout and session handling
- UI and browser checks (Chrome, Firefox, mobile view)

Out of Scope:

- Registration, Forgot Password and Profile (not available on this portal)
- Checkout and order completion
- Automation testing (Selenium, etc.)
- Performance, load and stress testing
- Penetration testing and deep security audits

4. Test Strategy / Approach

Testing Type	Description
Functional Testing	Each feature is tested against its requirement using valid inputs.
Negative Testing	Invalid, empty or unexpected inputs are used to confirm proper error handling.
Boundary Value Testing	Minimum and maximum limits (e.g., password length) are checked.
UI / Usability Testing	Layout, labels, spelling, alignment and ease of use are reviewed.
Compatibility Testing	Portal is checked on different browsers and screen sizes.

Basic Security Testing	Direct URL access without login, masked password, injection input and logout behavior are verified.
Regression Testing	After a bug is fixed, the failed test and related tests are executed again.

Test case design techniques used: Equivalence Partitioning, Boundary Value Analysis and Error Guessing. Execution is fully manual: steps are performed in the browser and results are recorded in the Test Case Suite (Excel file).

5. Test Environment

Item	Details
Operating System	Windows 10/11
Browsers	Google Chrome (latest), Mozilla Firefox (latest)
Devices	Laptop/Desktop; mobile view via browser developer tools (375 x 667)
Network	Stable broadband / Wi-Fi connection
Test Data	Demo users published on the SauceDemo login page (standard_user, locked_out_user, etc.) and a set of invalid inputs prepared before testing
Tools	Microsoft Excel (test cases), Browser DevTools, GitHub (version control), Screenshot tool

6. Roles & Responsibilities

Role	Responsibility
QA Intern (Tester)	Prepare test plan and test cases, execute tests, record results, log defects and retest fixes.
Mentor / Reviewer	Review deliverables, give feedback and approve final submission.

7. Entry & Exit Criteria

Entry Criteria:

- Portal is accessible and stable enough to test.
- Test plan and test cases are prepared and reviewed.
- Test accounts and test data are ready.

Exit Criteria:

- All planned test cases are executed.
- All High-priority test cases have passed, or open defects are documented.
- No open Critical or High severity defects remain.
- Test summary report is prepared.

8. Defect Management

Every failed test is logged with: Defect ID, title, steps to reproduce, expected vs. actual result, severity, priority and a screenshot. Severity levels:

Severity	Meaning
Critical	Portal crashes or a core feature (e.g., login) is completely unusable.
High	Major feature fails but a workaround exists.
Medium	Minor feature problem or wrong validation message.
Low	Cosmetic issue such as spelling or alignment.

Defect life cycle: New > Assigned > In Progress > Fixed > Retest > Closed (or Reopened).

9. Risks & Assumptions

Risks:

- Portal may be unstable or change during testing.
- Limited time (1-month internship) may restrict test depth.
- Demo site may be slow, reset, or change without notice.

Assumptions:

- Expected behavior is understood from normal e-commerce portal behavior.
- SauceDemo is a public practice site, so no real user data is involved.

10. Schedule

Activity	Duration	Timeline
Understand portal & prepare Test Plan	1 day	Week 1
Write Test Case Suite	2 days	Week 1
Execute test cases	2 days	Week 2
Log defects & retest	1 day	Week 2
Test summary & GitHub upload	1 day	Week 2

11. Deliverables

- Test Plan document (this file)
- Test Case Suite (Excel) covering all in-scope modules
- Defect / bug report with screenshots
- Test execution summary (Summary sheet in the Excel file)

12. Test Case Overview

Module	Coverage
Login	Valid/invalid login, empty fields, locked-out user, password masking, injection input

Products	Product list display, sorting options, product details page
Menu / Navigation	Menu open/close, All Items, About, Reset App State links
Cart	Add item, remove item, cart badge count, items persist
Logout	Logout, direct URL access after logout, back button
UI/Compatibility	Chrome, Firefox, mobile view, spelling and alignment

Detailed test cases (ID, steps, test data, expected result) are provided in the file Test_Case_Suite_Web_Portal.xlsx.
